IDEAS · INTELLIGENT DATA EXPLORATION ASSISTANT FOR SCIENCE

Logo options for team feedback

We're picking a visual identity for the IDEAS project website. Two technical concepts made the shortlist. The logo we choose also sets the site's color palette. Each option is shown on its own page: on light and dark backgrounds, in the site header, and at favicon sizes.

OPTION A · VOXEL WORDMARK

OPTION C · TERMINAL PROMPT

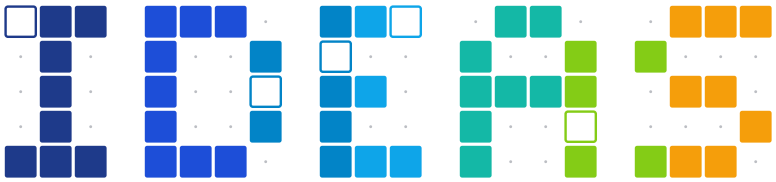

1 Which option do you prefer, A or C?

2 Does it read as "IDEAS" at a glance, including at small sizes?

3 Does it feel right for a DOE / ASCR research project?

4 Anything you'd borrow from the other option (colors, favicon, type)?

Voxel wordmark

5×19 voxels · colormap = transfer function · hollow = unsampled

on light

5×19 voxels · colormap = transfer function · hollow = unsampled

on dark

ink	blue	sky	teal	amber

CONCEPT

IDEAS spelled in voxels sampled through a volume: the colormap is a transfer function, and the hollow cells are voxels skipped by sparse sampling (importance masks). Background dots show the empty volume grid. Reads as sci-vis right away. At small sizes it becomes a voxel 'i'.

Terminal prompt

PALETTE

CONCEPT

The assistant as a command line: ❯ ideas, with a blinking cursor whose fill is a scientific colormap ramp (data in the prompt). The most 'geek' option, and it puts the AI assistant first. The favicon (❯ plus a colormap block) stays clear at 16px.
